Note: This table does not include the District of Columbia and Puerto Rico, which funded no positions at resource agencies. The Texas Division of FHWA has been added, because TxDOT cannot fund positions at federal resource agencies and the Texas Division has done so instead. TxDOT's remaining positions, like several from other states (noted with an *), are actually funded through services agreements and hence do not technically fund positions; however, this table intends to account for all positions funded, directly or indirectly, unless otherwise categorized and discussed in this report. The percentages on the following page are accounted utilizing 50 entities (states, with FHWA Texas Division included with TxDOT).

*The loss shown for State Departments of Natural Resources is somewhat misleading. North Carolina's Ecosystem Enhancement Program is no longer considered part of NCDOT's Funded Position Program. Rather, it is a component of the state DNR with independent funding, devoted to watershed planning and effective mitigation siting. This section employs 51 people in North Carolina and is considered a model by many other states, as well as federal agencies. Inclusion of this program would easily outweigh the relative decline shown by state DNRs with regard to distribution of the overall percentage of DOT-funded positions among the agencies. Agency distributions are calculated among federal agencies and among state agencies; i.e. 27% of all DOT-funded positions at federal agencies serve at USFWS.
