

June 2, 2008

Dear Senator:

On behalf of our over 170 organizations' millions of members, we urge Congress to pass legislation that addresses the challenge of climate change by significantly reducing emissions of greenhouse gases and by providing the new investments necessary to protect America's fish, wildlife, and other natural resources in the face of this unprecedented challenge. In particular, we commend the Lieberman-Warner Climate Security Act (S. 3036) for including the Adaptation Programs for Natural Resources (Title VI, Subtitle D and Title XII, Subtitles C and D). These important subtitles recognize the need to incorporate climate science and policy direction into natural resources conservation planning and provide the investment in natural resources conservation necessary to address climate change's unavoidable impacts.

Climate change poses the most significant threat to the natural world ever seen in the course of human history. Scientists warn what natural resources managers, hunters, anglers, and other outdoor recreationists already know: global warming is causing serious damage and disruptions to wildlife and ecosystems. Furthermore, climate scientists predict that such harmful disturbances will accelerate and worsen. These impacts include: changes in seasonal events that disrupt fish and wildlife populations and ecological communities; melting of polar ice caps; acidification of the oceans; declining snowpack; increased drought; warming of rivers, streams, lakes and estuaries; increased threat from invasive species; habitat shifts northward and upward in elevation; and more frequent catastrophic fires.

Each of these impacts poses a serious threat to the natural resource base that supports both people and wildlife. The natural systems that provide us with drinking water, flood protection, food, medicine, timber, recreational opportunities, scenic beauty, jobs, and numerous other services are at great risk.

Addressing these challenges will require an unprecedented new investment in strategies and activities that enhance the resiliency and sustainability of fish, wildlife and their habitats to climate change. We commend S. 3036 for including the Adaptation Programs for Natural Resources which recognize the magnitude of this challenge and dedicate a portion of allowance auction proceeds in a balanced and accountable manner to fish, wildlife, and habitat conservation efforts that address global warming's impacts.

The balanced approach adopted in these subtitles direct funding to federal, state, and tribal natural resources agencies for a variety of conservation efforts, under the guidance of science-based federal or state natural resources adaptation plans. This vital funding would be used for carrying out activities, including research, education, and planning, that assist fish and wildlife and their habitats in becoming more resilient and adapting to the impacts of climate change.

Adaptation activities would include providing the necessary resources for federal and state land and water managers to ensure the nation's complex network of federal and state lands, including parks and refuges, preserves, and forests, and the nation's water resources, such as estuaries, rivers, lakes and wetlands, are able to adapt to climate change's impacts. These subtitles also place special emphasis on: the protection of important habitat and species migration corridors through the Land and Water Conservation Fund and Forest Legacy Program; programs that partner with landowners

to restore and protect species on privately-owned lands; conservation of tribal lands; and coastal and estuarine habitat restoration efforts – all of which face increasing challenges due to global warming and inadequate federal, state, and tribal resources to meet those challenges. These subtitles recognize that federal, state and tribal natural resources agencies are on the front lines of conservation efforts to help fish, wildlife and ecosystems survive global warming and provide the resources those agencies desperately need to meet that challenge.

While recognizing that many of S. 3036's provisions are still being debated, this legislation represents a needed step forward in addressing the underlying causes of climate change and a strong commitment to providing the policy direction and investment needed to conserve the natural resources that fish, wildlife, and people depend upon. Given what is at risk of being lost, this investment is urgently needed. We urge Congress to pass strong climate change legislation that protects and restores our natural resources legacy - the basis of a strong and healthy society - for our children and future generations.

Sincerely,

Adirondack Council
