

Restoring Our Refuges: A Plan for Wyoming

The **National Elk Refuge** is moving away from a system of supplemental winter feeding to sustain bison and elk through the winter. Instead, the refuge plans to use alfalfa pellets for winter feeding until an irrigation system is built that will allow the animals to forage on naturally-grown grasses. This strategy is considered essential to the long-term health of elk and bison herds that migrate among **Grand Teton** and **Yellowstone National Parks** and the National Elk Refuge.

In 1991, the **endangered black-footed ferret** was first released in Wyoming's Shirley Basin. Similar releases occurred on National Refuges and state managed lands across Colorado, Montana, and Arizona.

National Elk Refuge, Wyoming

The National Wildlife Refuge System struggles to meet its wildlife conservation mission

In Wyoming alone, 20 mission-critical projects remain unfunded

Wyoming is home to spectacular natural resources including seven national wildlife refuges. These treasures protect the state's sprawling plains, wetlands, forested mountains, and grasslands and provide habitat for a great diversity of wildlife.

In **2008**, more than **888,000 visitors** enjoy hiking, birding, photography, environmental education, and hunting and fishing on Wyoming refuges.

Yet, national wildlife refuges in Wyoming may not be able to continue protecting wildlife and offering world-class recreation.

Wyoming wildlife refuges are saddled with deferred operations and maintenance projects that total more than \$5.2 million.

Today, the state's wildlife refuges need at least 20 additional positions. Those include 8 wildlife biologists, 3 guides and educators, and 8 essential maintenance and enforcement personnel. Without these people, Wyoming refuges will fall further behind in meeting the demand.

What's the solution? CARE recommends \$514 million for the Refuge System's FY 2010 Operations and Maintenance budget and an increase to at least \$765 million by FY 2013.

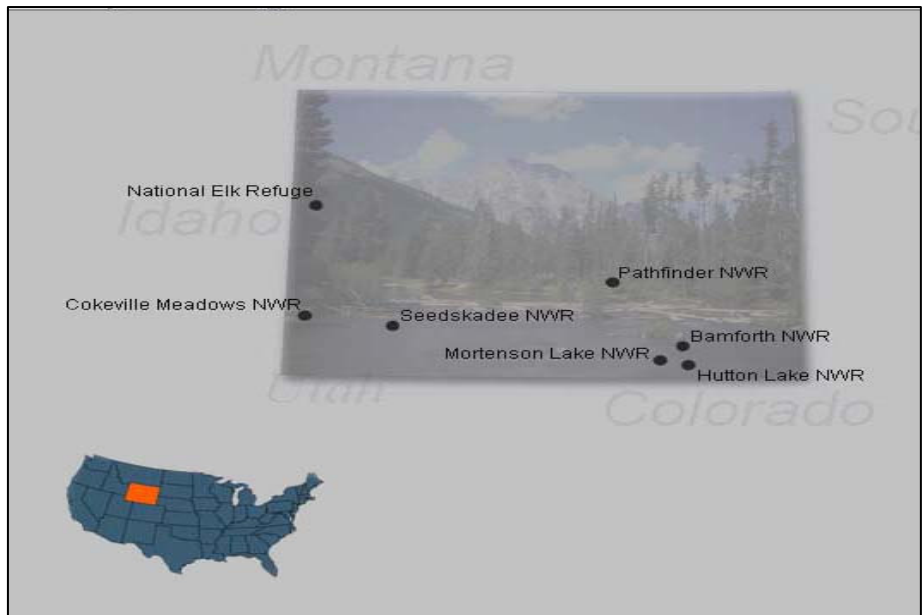

About C.A.R.E.

The Cooperative Alliance for Refuge Enhancement is a diverse coalition of 22 conservation, recreation, sporting, and scientific organizations with more than 14 million members and supporters across the United States. CARE has been working since 1995 to help the National Wildlife Refuge System fight a serious funding crisis.

Saddled with declining purchasing power and a \$3.5 billion backlog of deferred operations and maintenance projects, the National Wildlife Refuge System is in a financial vise

The Refuge System needs an annual increase of \$15 million in its operations budget just to keep pace with inflation and demand. The Refuge System welcomed more than 41.2 million visitors in 2008, up from 33 million in 1998.

National Wildlife Refuges are undeniable economic engines.

According to the *Banking on Nature* report from the FWS:

- Spending by visitors to refuges generated more than \$1.7 billion of sales nationwide, created 27,000 jobs in local communities and added \$543 million in employment income. These economic data do not include Alaska or Pacific island refuges, which together generate millions of annual visitors.

Yet, according to Management Systems International, a respected business consultant, the Refuge System has seen its real purchasing power decline by 11 percent between fiscal years 2003 and 2008.

The Government Accountability Office found that with continuing funding constraints and an expanding list of challenges, it may be difficult to maintain the Refuge System as envisioned in law – “where the biological integrity, diversity, and environmental health of the Refuge System are maintained; priority visitor services are provided; and the strategic growth of the system is continued.”

There is a solution to safeguard the world’s finest network of public lands dedicated to wildlife conservation: \$514 million in FY 2010 for the National Wildlife Refuge System and an increase to at least \$765 million by FY 2013 – steps that will restore operational quality and begin to chip away at the deferred operations and maintenance backlog.
